

Corporate and Retail

FLEXIBLE SECURITY DESIGN

For corporate applications, the StarWatch™ security management suite provides truly scalable solutions, from cost-effective, single storefront security systems to Enterprise-class, multi-facility installations.

Central to this flexibility of scale, a modular design allows users and integrators to define software and device configurations to their exact requirements by incorporating select features of access control, intrusion detection, video surveillance, and life safety technology. By integrating these capabilities under a single user interface, StarWatch offers a platform that is easy to operate and manage, provides complete situational awareness throughout your operation, and ensures that as your business and security needs grow, your system easily grows with you.

SYSTEM FEATURES

- Improved security and enhanced business intelligence
- Real-time personnel management, card/door monitoring, and visitor planning
- Open support for the latest generation of video management and recording technologies
- Access/secure intrusion detection for sensitive areas
- Protection of business-critical data and equipment
- Wireless lock management for interior doors
- Full entry point solutions for parking garages
- Integration with elevator control routines and systems

Whether your requirements are to protect sensitive files and equipment, secure the flow of employees and visitors through company offices and locations, or closely monitor interior and exterior spaces for irregular activity, StarWatch is your gateway to improved corporate safety and decreased business risk.

StarWatch offers solutions ranging from small, door-control systems for offices and retail spaces to integrated security for large, geographically dispersed corporate locations

PROVEN ACCESS CONTROL MODEL

Using exclusive, security automation technology honed through decades of military experience, StarWatch offers a physical access control solution that is well-suited for multi-tenant buildings or regionalized national corporations, regardless of the industry.

The system easily connects to the latest generation of readers, including contactless smart card and biometric devices, allowing you to strictly control who has access to your business and when, while eliminating the costs of rekeying. Via a dynamic, easy-to-use configuration module, company officials can set up customized access control schemes incorporating multiple authorization levels and calendar-based scheduling.

STARWATCH™

SMS

With integrated visitor management, StarWatch streamlines the visitor sign-in process, efficiently assigning credentials to guests or contractors with options for photo capture and driver's license scans for quick comparison against company or regional databases and/or criminal background checks. Once a visitor begins their appointment, the system tracks and time-stamps all associated data, such as when the person enters a building or interior zone, the reason for the visit, and who the person is visiting, for historical analysis and real-time report generation during emergencies.

Providing enhanced security for corporate personnel, data, and equipment, StarWatch easily connects to the latest generation of access control, intrusion detection, and video surveillance technologies

PROTECT AGAINST INTRUSION

StarWatch protects businesses against intrusion day and night through the seamless integration of smart, reliable security devices and components, from glass-break sensors to infrared cameras. An intuitive user interface enables security personnel to maintain situational awareness across all workspaces and perimeters and immediately respond to a changing environment.

Merging access control and intrusion detection data, the system maintains a single profile for each employee, contractor, or maintenance worker that includes a set of assigned roles and rights. These restrictions define which doors and building areas the individual can access during set time periods and whether they have the authorization to arm or disarm intrusion detection zones.

Opening/closing your facility is as simple as presenting an approved credential or connecting to your organization's Active Directory service or SAML single sign-on (SSO). With this level of integration, companies can closely control who can enter a secured space and even who can enter a secured system or workstation by requiring specific credentials or employing a multi-factor authentication process.
