

EDGE Conversion Panel

SIMPLE UPGRADE OF EXISTING EQUIPMENT

The EDGE Conversion Panel enables current users of Polaris or Elara III equipment to easily upgrade to the advanced EDGE remote, the latest generation of DAQ Callisto technology.

Eliminating the need for time consuming re-wiring, the panel provides a wiring harness that matches the connection locations of existing modules. The disconnection of Polaris or Elara III units and their replacement with EDGE RTUs becomes a simplified unplug/re-plug process.

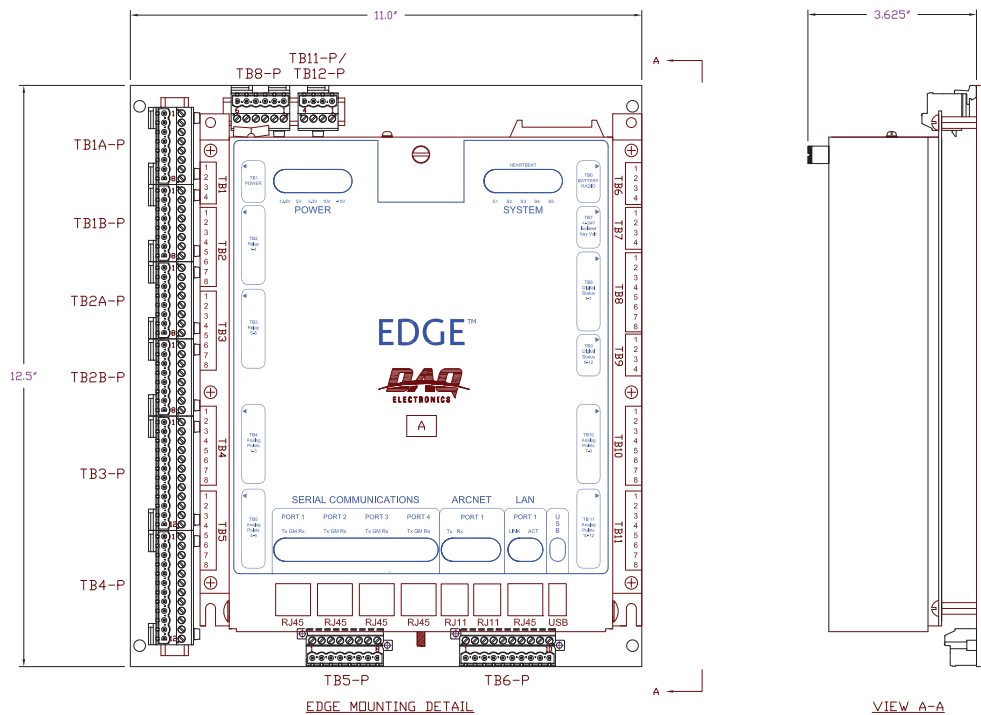

Shown mounted to an EDGE remote, the EDGE Conversion Panel provides an easy upgrade path for users of Polaris and Elara III units.

PANEL DIAGRAM

The diagram below indicates all terminal block connections.

- Panel is 1/8" aluminum
- EDGE RTU is shown for reference only and is ordered separately
